Android Ebay app targeting tabletop gamers

1) Group 32

2) I really liked this team's design choices, they are developing a mobile app and presented a really good design in their presentation. The UI looked very user friendly and thorough. I think they could have explained the design a little bit more in depth since there was a lot to it and it wasn't super intuitive.

3) I felt like there were too many slides in the powerpoint and they were going through it too fast. They could have made a lot fewer slides for things like what platforms they used and the advantages and disadvantages of things like Zoom and Github. Those things don't directly relate to their project and less time should be spent explaining those things. I did think their powerpoint was amazing and well put together.

4) I might collaborate to find out why they chose the framework they did to develop their android app. I know that there are native specific frameworks like Xcode for Apple and Android Studio for Android. However I would like to find out if they considered choosing a hybrid framework like Ionic, React Native, or Angular.

OnSchooler

1) Group 44

2) I liked the theme and overall goal of this project to provide an education resource platform. I liked their design choices and thought it properly represented an education platform.

3) This group did a good job with their presentation, but I would have liked to see more images and diagrams so I can visualize what's going on. The project itself is really cool and I feel like it could really make an impact on a lot of people's lives. I also thought their demo was really good.

4) I would like to collaborate with them to find out if they are planning on reaching out to schools or universities once their project is completed to see if they would be interested in using it. I would also like to compare the framework they are using to the framework my group is using to see why they chose the framework they did.

Mentory

1) Group 52

2) For this group it was hard to tell what their design was, they didn't really take us through a demo of their project. However, I did like the goal of their project which was to provide a marketplace for finding talented individuals. I think it would be helpful for them to show a possible design of their project so we can get an idea of what it will look like once it's completed.

3) I thought their presentation was very thorough and well presented. The only thing that felt like it was missing from it was a design of their app. They did a really good job explaining the background and why somebody would want to use it. I would have liked them to show a demo so we can get an idea of how it will turn out.

4) I would be cool to collaborate with them and find out what framework they are planning on using to create their app, and how in depth it will be on the front end and the back end.
